

WHIZZ KIDS: Children who attended the activity day run by ComputerXplorers Wessex with the LEGO robots they built and programmed to move

LEGO comes to life as kids get to grips with technology

CHILDREN in Malmesbury saw their LEGO come to life this week as they built moving robots at a special school holiday activity day.

Education project company **ComputerXplorers Wessex** brought their show to the town and gave local children the opportunity to get to grips with some exciting technol-

ogy. Children built their own robots from LEGO before programming them to move and make sounds.

Alan Crocker, director of **ComputerXplorers Wessex**, said: "We provide children with positive access to technology experiences, inspiring youngsters at primary schools to play and explore, use and

learn applications and technology that is creative and fun.

"We have run this programme a number of times across Wiltshire with great interest at every venue. Whilst those who attend are LEGO fans and know much about it, they are frequently amazed at how their models are brought to life."
